

# 219 MALE STERILE FORAGE SORGHUM

## Strengths:

- Early Season Vigor
- Standability following a freeze
- High Yield Potential of Hay

## Suggested Uses:

- Silage Single Cut
- Late-Season Graze Out
- Baled Feed
- Cover Crop

219 is a medium maturity with an excellent standability. With the male sterile trait it will produce high sugar, energy and protein, and is highly digestible. You will receive the best sugar content when it is harvested in the heading stage.

## AGRONOMICS

Silage Yield	3
Secondary Cut	NA
Nutritional Value	1
Seedling Vigor	1
Drought Tolerance	4
Lodging Resistance	2
Regrowth	NA
General Disease Resistance	2

1- Excellent    10-Poor

## PLANT CHARACTERISTICS

Days to Boot	75-80
Days to Soft Dough	Sterile
Days to Canopy	30-35
Plant Height	7'-8'
Palatability	Very Sweet
Average seed count/lb	19K-20K
Yields of 20-23 Tons	

- ✓ Seed at 1-1 1/2" depth @ 62°F
- ✓ Harvest in Boot or at Heading
- ✓ Drill at 10-12 lbs
- ✓ Dryland: 5-7 lbs planted  
Irrigated: 6-7 lbs planted
