

The Double Team Sorghum Cropping Solution is designed to provide sorghum growers the best sorghum grass weed control available. Double Team is comprised of two components: DT Trait sorghum and FirstAct herbicide. Used together, they give growers unprecedented over-the-top control of common grass weeds that lead to better yields and higher potential profitability. Double Team offers sorghum growers a unique set of benefits to maximize grass weed control and boost yields and profits, including:

- Tolerance trait that is non-GMO and provides excellent crop safety
- Effective control of broad range of grass weeds for cleaner fields and increased yields
- Rotational flexibility with shorter replant intervals for key crops DT Trait Overview

The DT Trait is the power behind Double Team Sorghum. A range of DT Trait sorghum hybrids have been developed to give growers flexibility and options, as well as to help address each farm's unique growing conditions. Double Team comes in both cream and bronze hybrids and have a range of maturity lengths.

Powering the grass weed control for the Double Team Sorghum Cropping Solution is FirstAct herbicide from ADAMA. Designed and formulated to be an exclusive component of the Double Team Sorghum Cropping Solution, FirstAct delivers sorghum growers reliable broad-spectrum grass control along with flexible rotation and higher yield potentials for more profitable returns per acre. FirstAct controls a wide variety of key grass weeds, including:

- Sandbur
- Volunteer Corn
- Volunteer Wheat
- Volunteer Sorghum
- Crabgrass
- Foxtail
- Barnyardgrass
- Texas Panicum
