

TRICAL 813

BEARDLESS TRITICALE

**813
(PVP)**

As triticale is best known for grazing and silage, 813 is a top-performing, very dense, leafy triticale. The large leaves are ideal for good protein and digestibility. Yield, standability, quality, and rust resistance are key characteristics to 813.

MATURITY AND AGRONOMICS

Yield Potential...High

Planting Time...Sept.-Dec.

Seeds/lb...10,500-11,500

Winter Hardiness...Favorable

Head Type...Beardless/Awnless

Plant Height...Medium (40-50")

Planting Rate Dryland...40-60lbs/acre

Planting Rate Irrigated...80-100lbs/acre

Maturity...Medium

Heading...107 Days

Lodging...1

Leaf Rust...1

Stripe Rust...1

Rating Scale: 1 (Excellent)-10 (Poor)

PRIMARY USES

- FALL & WINTER GRAZING
- SILAGE
- HAY

SUGGESTED GROWING REGIONS

- TEXAS
- NEW MEXICO
- OKLAHOMA
- KANSAS
- COLORADO
