

# 319 FORAGE SORGHUM

## Strengths:

- Sweet Stalk
- Standability
- Drought Tolerance
- Excellent Early growth

## Suggested Uses:

- Hay
- Forage
- Double Crop
- Grazing

319 is a medium maturing forage hybrid that is known for its high yielding performance. It has great drought tolerance and has very good standability for its height. For highest tonnage and best quality silage it should be harvested at soft dough. Cut in the hard dough stage for the highest sugar content in hay.

## AGRONOMICS

Silage Yield	3
Early Growth	3
Leafiness	3
Standability	4
Drought Tolerance	3
Stalk Sweetness	3
Appearance	4

1- Excellent      10-Poor

## PLANT CHARACTERISTICS

Days to Boot	65-70
Days to Soft Dough	100-110
Plant Height	8'-10'
Palatability	Very Good
Average seed count/lb	19K

- ✓ Seed at 1-1 1/2" depth @ 60°F
- ✓ Listed on the LDP list
- ✓ Do not exceed 125# Total N
- ✓ Seeding Rate Drilled: 12-18lbs/ ac
